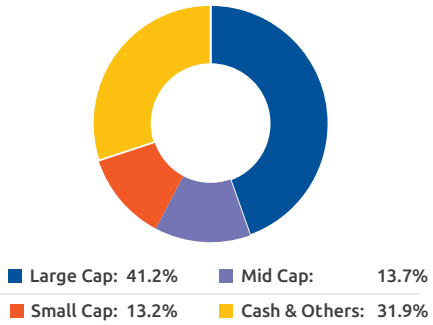
MARKET CAP PROFILE



FUND FEATURES

- Combines low correlated Equity & Gold to deliver a balanced investment experience.
- Since Jan'24 gold allocation has been 20 to 25%
- This combination aims for a better risk adjusted return during volatility.
- Especially suitable for investing in volatile and uncertain market conditions.

Equity Allocation

Net long equity stands at 68.1% of the portfolio, with ~ 60% as large cap exposure in it and ~40% as mid cap and small cap. Sector positioning remains moderate, with a growth bias and focus on reasonable risk-reward.

Overweight

Overweight on Financial Services: supported by improving credit demand, ample system liquidity, stable asset quality, and reasonable valuations.

Overweight on Telecom: Robust earnings & cash flow growth, led by tariff hike cycle, better operating leverage, improved profitability and debt reduction.

Overweight on Infrastructure and Capital Goods sectors: aided by government's enhanced infra and defense budget outlays, as well as increased data centre investments in India. We prefer stocks that have the combined moat of execution excellence, technological superiority, and policy protection.

Overweight on IT: valuation-led play combined with a structural bet on Artificial Intelligence (AI) transformation. In addition, a defensive hedge in a volatile global macro environment, as IT services companies are a resilient cash-flow-generating sector with consistent dividend payouts.

Overweight on REITs (in Aggressive Hybrid and Balanced Advantage): strong growth in leasing of commercial office space, led by demand from GCCs. REITs offer exposure to income-generating real estate assets through periodic distributions, which may vary depending on the underlying portfolio performance and market conditions.

Underweight

Underweight on Metals & Mining: reflecting global uncertainties and evolving business trends in the current macro environment. A prolonged geo-political conflict could result in global demand slowdown, rising input costs, and earnings volatility.

Underweight on Utilities: the sector's regulated equity model and relatively slow-and-steady nature would result in earnings growth lagging that of high-growth sectors.

Underweight on FMCG: unfavourable risk-reward due to expensive valuations.

Gold Allocation

Gold has been generating high returns, driven by central banks purchase and intensified geopolitical tensions.

We are keeping high gold allocation considering as an asset class for balancing portfolio risk during volatile cycles and offering stable growth over the long term.

The mix of equity and gold creates a well balance when there are concerns about market valuations and volatility.

FUND MANAGER OUTLOOK

The current market environment reinforces the relevance of a diversified, multi asset approach. Equities are navigating a phase of heightened volatility driven by a supply chain–led energy shock, where outcomes depend largely on the duration of disruption rather than a structural deterioration in fundamentals. At the same time, gold is in a temporary pause phase due to short term dollar strength, even as its longer term diversification role remains intact once geopolitical risks stabilise. In this backdrop, the Sundaram Multi Asset Allocation Fund is well positioned to balance near term equity volatility with the stabilising influence of gold and other asset classes. This makes the strategy particularly relevant for investors seeking smoother return profiles through uncertain macro phases without relying on precise market timing.
