Sundaram **Arbitrage** Fund

An open-ended scheme investing in arbitrage opportunities

Fund Insights - October 2025

HOW ARBITRAGE WORKS?

The Process of Buying in one market and selling in another market simultaneously to take advantage of the price difference is called arbitrage. Typically, the fund invests in arbitrage opportunities simultaneously in cash and derivative segments of the equity market.

THE MAJOR ARBITRAGE RETURN DETERMINANTS

- 1. Short Term interest rate is the biggest determinant of future price of any asset. Thus, in a higher interest rate scenario, the arbitrage returns are generally higher versus a low-interest rate scenario.
- 2. Mood of the Market: Demand & Supply plays a major role in determining the future price of a stock. In Bullish Market, demand for buying futures increases which increases the future price. In Bearish Market, demand for selling futures increases which reduces future price.
- 3. Fund Flows: As more money flows into the category, spread decreases.
