Brief note on fixed-income and money market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value: Stated value of the paper /Principal Amount Coupon: Zero, fixed or floating

Frequency: Semi-annual; annual, sometimes quarterly Maturity: Bullet, staggered

Redemption: FV; premium or discount Options: Call/Put

Issue Price: Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Types of Debt Market Instruments:

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter- bank Call money deposit, CBLOs etc. They are mostly discounted instruments that are issued at a discount to face value.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year. Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities include central, state and local issues. The main instruments in this market are dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Corporate Debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

The following table gives approximate yields prevailing during the month of October 2025 on some of the instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro economic conditions and RBI policy

(iii) Regulators:

The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment Facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Fixed income and money market segments

The market for fixed-income securities in India can be briefly divided into the following segments:

- The money market – The market for borrowing / lending money;
- The securities market – The market for trading in securities and
- The derivatives market – The market for fixed income derivatives. In this predominantly institutional market, the key market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and companies. Provident / pension funds, though present, are not active players.

The Money Market

The money market can be classified into two broad categories

The market for clean borrowing/lending without backing of any collateral:

- **Call Money:** The market for overnight borrowing/lending.
- **Notice Money:** The market for borrowing/lending from 2 days to a fortnight.
- **Term Money:** The market for borrowing/lending from a fortnight to six months.

The market for collateralised borrowing/lending:

- **Repo transactions:** These are redemption-obligation transactions in which the borrower tenders securities to the lender; these securities are bought back by the borrower on the redemption date. The price difference between the sale and redemption of the securities is the implicit interest rate for the borrowing/lending. The eligible underlying securities for these transactions are government securities and treasury bills. Corporate bonds are not allowed as eligible securities for repo transactions. The minimum repo term (lending /borrowing period) is one day.
- **CBLO:** CBLO stands for Collateralized Borrowing and Lending Obligation. CBLO is a discount instrument introduced by the Clearing Corporation of India Limited (CCIL). They can be traded like any other discount instrument. Lenders buy CBLOs and borrowers sell CBLOs. CCIL manages the risks inherent in issuing these securities through a system of margins and deposits that it takes from both lenders and borrowers. CBLOs can be issued/bought/sold for a minimum of one day to a maximum of 364 days.

The Securities Market

The market for fixed-income securities can be broadly classified into

- **The market for money market (short-term) instruments:** Money- market securities are generally discount securities maturing within one year from the date of issuance. Instruments satisfying this criterion are treasury bills (obligations of the government), commercial paper (obligations of the corporate sector) and certificate of deposit (obligations of banks).
- **The market for Government Securities:** Government securities are medium-/long-term fixed income securities of the government. The market for government securities is the most liquid segment of the fixed-income market in India. Most of the secondary market trading is concentrated in government securities. Trading in government securities is now done mostly through an electronic trading, reporting and settlement platform developed by the Reserve Bank of India (RBI) called Negotiated Dealing System. The role of brokers, which was an important element of the Indian bond market, is now less significant in this segment than in the past.
- **The market for corporate bonds:** Trading in corporate bonds is relatively subdued (in comparison to government securities). Price discovery and trading in this segment are still through the telephone. Attempts at improving the trading, settlement and risk- management practices for trading corporate bonds are currently underway.
- **The market for floating-rate securities:** The coupon rate in floating- rate securities is linked to an acceptable benchmark. Floating-rate securities generally have a coupon rate, which is reset over a regular period depending on the benchmark chosen. The market widely uses the MIBOR benchmarks announced by Independent agencies such as NSE and Reuters. When benchmark interest rate rises, the income generated on these floating-rate securities may also rise. When the benchmark interest rates decline, the income generated on these floating-rate securities may decline. Increasingly more companies are raising resource through floating-rate securities. Most of such securities are in the form of floating-rate debentures at a spread over NSE MIBOR. The other popular benchmark is the Indian Government securities benchmark yield (known as INBMK). The reset in such cases happen after a period of time, generally six months. The Government of India has also started issuing floating-rate securities using INBMK 1 year as the benchmark.

(v) Market Participants:

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary Dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(vi) Trading Mechanism:**Government Securities and Money Market Instruments**

Negotiated Dealing System (NDS) is an electronic platform for facilitating dealing and online reporting of transactions. Government Securities (including T-bills), call money, notice/term money, repos in eligible securities, etc. are available for negotiated dealing through NDS. Currently G-Sec deals are done telephonically and reported on NDS.

Corporate Debt is basically a phone driven market where deals are concluded verbally over recorded lines. The reporting of trade is done on the NSE Wholesale Debt Market segment.

C. WHAT ARE THE INVESTMENT STRATEGIES?

The focus of this Scheme is to give optimum returns in the medium to long term with a diversified portfolio of micro-cap stocks. There is no fixed thumb rule as to what constitutes a micro-cap stock, the fund is fixing the universe using the threshold of stocks with a market cap equal to or lower than that of the 301st stock by market cap on the NSE. A portion of the Scheme's assets would be invested in relatively liquid large capitalisation stocks. Investments may also be made in Initial Public Offerings, Medium and Small Capitalisation stocks and unlisted securities. The fund may also from time to time invest in unrated and non publicly offered illiquid securities. The fund has a policy of internal valuation of all debt investments and such investments will be made subject to necessary approvals.

1. We define Micro cap as those stocks whose market capitalisation is equal to or lower than the 301st stock by market cap (after sorting the stocks in descending order of market cap) on the National Stock Exchange of India. We believe our universe of investable stocks is between 301 and 700 – i.e. a total of 400 stocks. The aggregate market capitalization of these 400 stocks is Rs 6.50 lakh crores and their average trading volumes (10 day trading average, source, Bloomberg) is 10,81,000 with the largest trading volume of 5 crore shares and smallest trading volume of 1275. Leaving out the bottom 100 least liquid stocks the trading volume of the 300th stock in the universe of 400 stocks is 29,000. As our portfolio is most likely to be confined towards the larger end of the Universe we feel that there will be adequate liquidity for the portfolio.
2. Our portfolio will consist of around 50 stocks and one of the criteria for selecting a stock will be liquidity (i.e. adequate trading volumes). We will ensure that only stocks with adequate trading volume will be purchased. (Adequate trading volume will be defined as trading volume sufficient to exit the stock in its entirety within 15 days based on the 10 day trading volume prior to the date of purchase). We have an in-house risk management team

who will monitor the trading volumes of each of the stocks on a daily basis and will red flag any potential cause for concern if the trading volumes were to fall for any reason. Once a stock has been red flagged we will have an Investment committee meeting comprising of the Fund Manager, the CEO, the MD and Head of Operations and the committee will decide if we need to exit the stock.

3. We will also ensure on an ongoing basis that the entire portfolio can be liquidated within 30 days assuming 50% of the average trading volume of the stocks.
4. We will ensure that the initial redemptions post expiry of the 3 year lock in is made substantially out of the lesser liquid stocks in the portfolio thereby ensuring that the residual investments in the Fund have those stocks with the highest liquidity”.

In the event of deviations, the fund manager will carry out rebalancing within 30 days.

The fund shall follow a combination of Top-down and Bottom-up approach to investing in equity and equity related investments. Investments will be pursued in select macro themes, which cut across various industries and sub sectors (e.g. Restructuring, Infrastructure spending, Skilled labour, etc.). Within such a framework, the emphasis will be on investing in companies with quality management unique business strength, sustainable medium/long term growth and reasonable valuations.

The Investment Manager will keep in mind the Investment Objective of the Scheme and the applicable Regulations/Equity-Linked Savings Scheme Guidelines

Procedure for investment decisions

The Investment Process may be classified into:

Research & Analysis: Research is meant to look at opportunities differently from the market and competition. The Investment Manager has a research set up that works to identify Investment opportunities through continuous research on sectors and companies that are relevant to the theme and investment objectives of the Scheme. The analysis focuses on the past performance and future prospects of the company and the business, financial health, competitive edge, managerial quality and practices, minority shareholder fairness, transparency. Companies that adequately satisfy the prescribed criteria are included in the portfolio. The weight of individual companies will be based on their upside potential relative to downside risk.

Approval of Securities: After the identification of the stock on the basis of four minimum parameters- balance sheet, profit

and loss statement, valuation and ratios- the stock is approved by the Internal Investment Committee (comprising of the Managing Director, Fund Managers - Equity and Fixed Income before any investment can be made. For research, inputs from published sources and reports of broking houses will be used. In order to eliminate more risks and ensure higher reliability, at least one management contact either by way of visit, or any other form of communication will be mandatory once a quarter.

Portfolio Construction & Selection of Stock for Investment / Sale: The Fund Manager will construct the portfolio with stocks in the approved universe within the guidelines set in the Scheme Information Document and by the IIC for the Scheme. The Fund Manager will be the sole deciding authority in relation to stock selection, allocation of weight, sale & purchase of stocks and other issues that are related to portfolio construction.

Monitoring: The IIC of the Board reviews the performance of the Scheme and the decisions of the Internal Investment Committee. Head Equity and Head-Fixed Income are permanent invitees to the meetings of the committee. The reasons for purchase / sale are recorded in the system/Deal Tickets. Every quarter, the fund manager presents a review of all decisions taken and on fund performance to the Board of Directors of the Investment Manager and the Trustee Company.

Risk Control: As investing requires disciplined risk management, the Investment Manager would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification. With the aim of controlling risk, rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the Investment Manager.

Risk Mitigation: An independent risk management team is in place to oversee and monitor portfolio risk on a day-to-day basis. Internal risk control guidelines are in place and the portfolio contours are tracked on a daily basis to ensure adherence. Any deviation is brought to the notice of the Managing Director and the fund manager for corrective action. Follow up actions are made to ensure that the deviation is corrected within the time period prescribed in internal risk control guidelines. Adherence to limits from SEBI regulations as well as stipulations in the Scheme Information Document is monitored by the Compliance team. The Risk Management team reports to the CEO / MD.

Risk Process / Guidelines: Risk Management is an independent function and the Risk team reports directly to the MD. Broadly the function is divided into two – Regulatory and Internal. Regulatory risk consists of ensuring adherence to all the rules prescribed by the SEBI as well as the limits prescribed in the Offer documents. Internal risk monitoring consists of a host of other parameters that the risk team monitors on a continuous basis like internal limits (i.e. soft limits established to red flag potential breach in SEBI prescribed limits), adherence to fund style, operational and preparation of reports etc.,

The primary mechanism that the Risk team employs to monitor is through Bloomberg. All the rules (regulatory and internal) are uploaded into Bloomberg which thereafter monitors its adherence on a continuous basis. All trades are routed through Bloomberg systems and hence no deviation can occur without an alert being triggered by the Bloomberg system. Any breach in limits consequent to inputting of a trade is flagged off with various levels of concern and needs specific approvals in order to proceed.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Nifty Small Cap 100 TRI

The Nifty Small Cap 100 TRI was launched on January 01, 2004 and is designed to measure the performance of small-cap companies listed at NSE Ltd. The composition of the aforesaid benchmark is such that it is most suited for comparing performance of the scheme. This is the only metric that is proximate in tracking the micro-cap category.

The Trustee reserves the right to change the benchmark if due to a change in market conditions, a different index appears to be providing a more appropriate basis for comparison of fund performance or if the indicated benchmark ceases to exist or undergoes a substantial change that renders it an ineffective base for performance comparison and analysis.

Part III- OTHER DETAILS**A. COMPUTATION OF NAV**

The Net Asset Value (NAV) is the most widely accepted yardstick for measuring the performance of any Scheme of a Mutual Fund. NAV calculations shall be based upon the following formula:

$$\frac{\text{Market value of the Scheme's investments + other current assets + deposits – all liabilities except unit capital, reserves and Profit \& Loss Account}}{\text{Number of units outstanding of the Scheme}}$$

Valuation of Securities will be according to the valuation norms, as specified in Schedule VIII of the Regulation and will be subject to such rules or Regulation that SEBI may prescribe. The Debt and Money market securities are valued based on the prices provided by AMFI approved agencies such as CRISIL & ICRA. Please refer the valuation policy on our website <https://www.sundarammutual.com/Report/ODVLP>

NAV of the Scheme – Plan/Option wise - will be calculated and disclosed up to four decimals. For details of Valuation of Overseas Securities, please refer Statement of Additional Information.

Methodology of calculating the sale and repurchase price of units

Sale Price: Applicable NAV subject to Stamp Duty

Repurchase Price: The exit fee is usually a percentage of the Net Asset Value (NAV) of the mutual fund held by investors. Once the AMC deducts the exit load from the total Net Asset Value, the remaining amount gets credited to the investor's account.

Suppose, an investor has invested Rs.10,000 in mutual fund schemes in January 2017. The NAV of the scheme is Rs. 100 and the exit fee for redeeming before one year is 1%. In March 2017, the investor opt for an additional investment of 50 units at Rs 105 in the same fund. He redeems all his investments in the fund in November 2017, when the NAV is Rs. 110 in scenario 1 and Rs 115 in scenario 2 (February 2018)? His exit load is as follows:

100 Units bought in January 2017 @ Rs 100 = Rs 10,000

50 units bought in March 2017 @ Rs 105 = Rs 5,250

Scenario 1 (Full Redemption before completion of 1 year)

Exit charges on redemption in November 2017.

Exit Load: 1% of [(100 units x Rs. 110) + (50 units x Rs. 110)] = Rs 165.

The amount credited the investor Rs. 16,500 (Rs. 110*150 units) – Rs. 165 = Rs. 16,335 (Total Amount – Exit fee & STT)

In scenario 1 exit load is applicable on 150 units purchased in January and March 2017 as the holding period is less than 1 year

illustration for understanding

Initial purchase on April 1, 2023- 10,000 units

Additional purchase on April 15, 2023- 5,000 units

The scheme has exit load if redeemed before 1 year.

Maximum redemption permitted without exit load for each purchase transaction: 30% of the units purchased

Load applicability under various scenarios

Exit load is applied for each purchase transaction separately and no clubbing of transactions will be allowed for computing the maximum load free exit allowed for the

respective scheme. Since FIFO method for processing the redemption request is applicable, load free exit for the purchases made subsequent to the initial purchase will

be available only after the investor redeems all units purchased by him in the initial purchase. Accordingly, if the investor redeems the below units on or before May 28, 2024,

exit load will be applicable as follows:

Number of units redeemed (including previous redemptions, if any)	Load payable on exit	Remarks
Upto 2500 units	Nil	No exit load is applicable, if the number of units redeemed are up to the limit of 10% of initial purchase made on April 1, 2023
3000 units	Exit load of 1% will be charged on the NAV for redeeming 500 units	Exit load will be applicable for redemption made over and above the limit of 30% of the initial purchase made on April 1, 2023. Since the Scheme follows FIFO method for redemption, investor will have to redeem the entire units purchased on April 1, 2023 before claiming load free redemption of 500 units from the Additional units purchased on April 15, 2023.
10000 units	Exit load of 1% will be charged on the NAV for redeeming 7500 units	
15000 units	Exit load of 1% will be charged on the NAV for redeeming 11250 units	2500 units from the initial purchase made on April 1, 2023 and 1250 units from additional purchase made on April 15, 2023 will be redeemed without exit load. Exit load will be applicable for the redemption of the balance 11250 units.

SECTION II

I. Introduction

A. Definitions/interpretation

The detailed definitions/ interpretations refer to the link on website of the mutual fund viz.

<https://www.sundarammutual.com/sid-kim-disclosures>

B. Risk factors

Detailed Scheme-Specific Risks

- The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise in the event that the scheme is wound up for the reasons and in the manner provided under the Scheme Information Document & Statement of Additional Information.
- Redemption by the unit holder due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustees, AMC, Fund their directors or their employees shall not be liable for any tax consequences that may arise.
- The tax benefits described in the SAI & SID are as available under the present taxation laws and are available subject to relevant condition. The information given is included only for general purpose and is based on advice received by the AMC regarding the law and practice currently in force in India and the Investors and Unit Holders should be aware that the relevant fiscal rules or their interpretation may change. As in the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of the investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor / Unit holder is advised to consult his/her/its own professional tax advisor.
- Sundaram Long Term Micro Cap Tax Advantage Fund Series III would be investing in equity & equity related instruments, debt and money market instruments (such as term/notice money market, repos, reverse repos and any alternative to the call money market as may be directed by the RBI). The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees have the right in their sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.
- The Mutual Fund is not assuring any dividend nor is it assuring that it will make any dividend distributions. All dividend distributions are subject to the availability of distributable surplus and would depend on the performance of the scheme.
- Redemption of units under the Scheme available only after a three year lock-in period from the date of allotment of units
- Micro-cap stocks are generally illiquid in terms of trading volumes; investors should assume that liquidity risks are higher. This may result in higher impact costs. Impact costs are those costs that are incurred for acquiring and disposing off stocks. These are different from brokerage and custodian charges. The Scheme does not guarantee that impact cost will be minimized or eliminated.
- Transparency/liquidity levels may not be on par with established, large companies. Corporate governance may be an issue with some companies. They may not be resilient enough to withstand shocks of business/economic cycles.
- While micro cap companies may offer substantial opportunities for capital appreciation, there are also at least commensurate risks. Historically, these companies have been more volatile in price than larger company securities, especially over the short term. Among the reasons for the greater price volatility are the less certain growth prospects of smaller companies, the lower degree of liquidity in the markets for such securities, lack of transparency and the greater sensitivity of smaller companies to changing economic conditions.

- In addition, micro-cap companies may lack depth of management, be unable to generate funds necessary for growth or development, or be developing or marketing new products or services for which markets are not yet established and may never become established. They could also suffer from disadvantages such as outdated technology, lack of bargaining power with suppliers, low entry barriers and inadequate management depth

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuate, the value of your investment in the Scheme may go up or down. As with any investment in stocks, shares and securities, the NAV of the Units under the Scheme can go up or down, depending on the factors and forces affecting the capital markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- Sundaram ELSS Tax Saver Fund is only the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs 1 lakh made by them towards setting up the Fund (The present scheme) is not a guaranteed or assured return scheme.

General Risk Factors

- Mutual Funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- The main types of risks to which the Scheme is exposed are risk of capital loss, market risk, currency risk, liquidity risk, credit risk, counter party default risk, to name a few.
- As with any investment in securities, the NAV of the Units issued under the Scheme can go up or down depending on the factors and forces affecting the capital markets.
- The NAV may be affected by factors such as market conditions, level of interest rates, market-related factors, trading volumes, settlement periods, transfer procedures,

price/interest rate risk, credit risk, government policy, volatility and liquidity in markets, exchange rate, geo- political development, to name a few.

- Trading volumes in the securities in which the Scheme invest may inherently restricts the liquidity of the Scheme's investments.
- Change in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to Investors in the Scheme.
- The tax benefits available under the Scheme is as available under the present taxation laws and subject to relevant conditions. The information given is included for general purposes only and is based on advice that the Investment Manager has received regarding the law and the practice that is now in force in India.
- Unit holders should be aware that the relevant fiscal rules and their interpretation might change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor/Unit holder is advised to consult his/her own professional tax advisor.
- Investors/unit holders are also urged to read the detailed clause(s) titled 'Special considerations'.
 - FATCA imposes tax withholding upto 30% on any payments (including redemption and dividend proceeds) made by the Fund/AMC to a US Person classified as recalcitrant account holder in respect of whom the applicable documentation and reporting requirements are not met.

This is only an illustrative list and not an exhaustive list factors that could affect the NAV of the Scheme. They

should read the risk factors presented in this document though the list is no way exhaustive. Potential investors should rely solely on the information contained in this Scheme Information Document and are advised to consult their investment advisors before taking investment decisions.

Risk Factors associated with closed end equity funds

- The AMC may be required to liquidate the equity portfolio and the proceeds may be kept in cash and invested largely in cash equivalents/money market instruments during the last six months of the tenure of the respective series of the scheme and to that extent, these investments may not be in line with the asset allocation pattern. Such investments may not also provide the returns equivalent to those provided by investment in equity.
- A close-ended Scheme endeavours to achieve the desired returns only at the scheduled maturity of the Scheme. Hence, Unit Holders who sell their Units prior to maturity market liquidity .
- **Liquidity Risk:** A lower level of liquidity affecting an individual security (ies) or an entire market may have an adverse bearing on the value of the Scheme's assets. This may more importantly affect its ability to sell particular securities with minimal impact cost as and when necessary to meet requirement of liquidity or to sell stocks in response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few of the investments.
- Risk relating to investment pattern: Different types of securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the Scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate debt carry credit risk unlike Government securities. Further even among corporate debt, AAA rated debt is comparatively less risky (in credit risk terms) than those rated may not get the desired returns.
- Investment decisions made by the AMC may not always be profitable, even though it is intended to generate capital appreciation by actively investing in equity and equity related securities. Investors therefore will have to accept the returns generated by the underlying equity investments of the scheme which may be unfavourable at the time of maturity of the scheme.

Risk of Capital Loss

The Net Asset Value (NAV) of the Scheme is exposed to market fluctuations, and its value can go up as well as down. Investors may lose their entire principal.

Risk Factors - Debt Markets

- **Interest Rate Risk:** Changes in the prevailing rates of interest may affect the value of the Scheme's holdings and consequently the value of the Scheme's Units. Increased rates of interest, which frequently accompany inflation and /or a growing economy, may have a negative effect on the value of the Units. The value of debt securities held by the Scheme generally will vary inversely with the changes in prevailing interest rates.
- While it is the intent of the fund manager to invest primarily in high rated debt securities, the Scheme may from time to time invest in higher yielding, low rated securities. As a result, an investment in the Scheme may be accompanied by a higher degree of risk relative to an investment consisting exclusively of high rated, lower yielding securities
- **Credit Risk:** Credit Risk refers to the risk of failure of interest (coupon) payment and /or principal repayment. All debt instruments carry this risk. Government securities carry sovereign credit risk. The assets of the Scheme will be partly or entirely invested in fixed income securities issued by a corporate entity, bank, financial institution and/or a public sector undertaking owned by the Government of India or by a government in any state. The credit risk associated with the aforementioned issuers of debt is higher than that of government securities.
- **Price Risk:** As long as the Scheme will be invested, its Net Asset Value (NAV) is exposed to market fluctuations, and its value can go up as well as down. The portfolio of fixed-income securities that the Scheme invest in would be exposed to price changes on a day-to-day basis.
- These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. In general, price of fixed-income securities go up when interest rates fall, and vice versa.
- **Market Risk:** The Scheme may also be subject to price volatility due to such factors as interest sensitivity, market

perception or the creditworthiness of the issuer and general market liquidity.

- **Liquidity Risk:** A lower level of liquidity affecting an individual security (ies) or an entire market may have an adverse bearing on the value of the Scheme's assets. This may more importantly affect its ability to sell particular securities with minimal impact cost as and when necessary to meet requirement of liquidity or to sell stocks in response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few of the investments.
- **Risk relating to investment pattern:** Different types of securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the Scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate debt carry credit risk unlike Government securities. Further even among corporate debt, AAA rated debt is comparatively less risky (in credit risk terms) than those rated lower (say AA or A).
- **Risks relating to duration:** Fixed Income securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security.
- **Non-diversification Risk:** The Scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of one issuer (within the limit permitted by regulation) as compared to a diversified fund. This could have implications for the performance of the Scheme. The Scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the Scheme.
- **Limited Liquidity & Price Risk:** Presently, secondary market for fixed income papers is not very liquid. There is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure.

Risk Factors - Equity Markets

Stock Market Volatility: Stock markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Different parts of the market can react differently to these developments. The stock- specific volatility may also change over a period of time as the characteristic of the stock undergoes a change in terms of market-cap category

Equity Price Risk: Stock prices may rise or decline based on a number of factors. These could be a combination of company- specific and system-specific factors. Their impact on different types of stocks may vary. Prices change due to events that impact entire financial markets or industries (for example, changes in inflation, consumer demand, supply situation and GDP growth). Company-specific factors may include the likes of success or failure of a new product, mergers, takeovers, earnings announcement and changes in management, to name a few. Securities owned by the Scheme may offer opportunities for growth because of high potential earnings growth; they may also involve greater risks than securities that do not have the same potential.

Dependency Risk: The Scheme may invest in stocks and mutual funds and exchange-traded funds linked to stocks. Equity confers a proportionate share of the ownership of a company. Its value will depend on the success of the company's business, income paid to stockholders by way of dividend, the value of the company's assets, quality of its corporate governance practice, its attractiveness relative to peers and general market conditions. The fund may also invest in convertible securities and warrants. Convertible securities generally are fixed-income securities or preference shares that may be converted into common stock after a prescribed period.

Temporary Investment Risk: If the fund manager is of the view that market or economic conditions may become unfavourable for investors in equities, he may invest a higher proportion of the fund's assets in high quality short-term and medium-term fixed income instruments as well as near-cash equivalents. This may be a defensive and temporary strategy. The fund manager may also adopt such a strategy while zeroing in on appropriate investment opportunities or to maintain liquidity. At times, such investments may lead to lower returns. In these circumstances, the Scheme may be unable to achieve its investment goal. Such temporary investment shall not exceed for period more than 30 days

Non-diversification Risk: The Scheme may pursue only a limited degree of diversification. It may invest a greater

proportion of assets in the securities of one issuer (within the limit permitted by regulation) as compared to a diversified fund. This could have implications for the performance of the Scheme. The Scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the Scheme.

Regulation-Change Risk: If the Government of India, RBI and/or SEBI decide to alter the regulatory framework for investment in overseas financial assets by mutual funds, it may have an impact on the Scheme's ability to adhere to the investment objective. If and when such an eventuality materialises, the Trustee reserves the right to alter the investment objective of the Scheme or wind up the Scheme. In such cases of fundamental attribute change, the procedure in accordance with SEBI Regulations as highlighted in this document under the heading "F. Fundamental Attributes" will be adhered to.

Minimum Number of Investors & Single-Investor Limit

As per SEBI Regulations, the Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme in each calendar quarter on an average basis. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulation would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

Details under FATCA/Common Reporting Standards (CRS)/Foreign Tax Laws

Compliance under Foreign Account Tax Compliance Act /Common Reporting Standard requirements: Foreign Account Tax Compliance Act: Foreign Account Tax Compliance Act ("FATCA") is a United States (US) law aimed at prevention of tax evasion by US citizens and residents ("US Persons") through use of offshore accounts. FATCA obligates foreign financial institution (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information on the accounts of to report accounts held by specified US Persons. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts. With respect to individuals, the US reportable accounts would cover those with US

citizenship or US residency. The identification of US person will be based on one

or more of following "US indicia" • Identification of the Account Holder as a US citizen or resident; Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number; • Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An "in-care of or "hold mail" address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. Since domestic laws of sovereign countries, (including India) may not permit sharing of confidential client information by FFI's directly with US IRS, the U.S. has entered into Inter-Governmental Agreement (IGA) with various countries. The IGA between India and USA was signed on 9th July, 2015, which provides that the Indian FIs will provide the necessary information to Indian tax authorities, which will then be transmitted to USA automatically. Common Reporting Standard - The New Global Standard for Automatic Exchange of Information: On similar lines as FATCA, the Organization of Economic Development (OECD), along with the G20 countries, of which India is a member, has released a "Standard for Automatic Exchange of Financial Account Information in Tax Matters", in order to combat the problem of offshore tax evasion and avoidance and stashing of unaccounted money abroad, requiring cooperation amongst tax authorities. The G20 and OECD countries have together developed a Common Reporting Standard (CRS) on Automatic Exchange of Information (AEOI). The CRS on AEOI was presented to G20 Leaders in Brisbane on 16th November, 2014. On June 3, 2015, India has joined the Multilateral Competent Authority Agreement (MCAA) on AEOI. The CRS on AEOI requires the financial institutions of the "source" jurisdiction to collect and report information to their tax authorities about account holders "resident" in other countries, such information having to be transmitted 'automatically' annually. The information to be exchanged relates not only to individuals, but also to shell companies and trusts having beneficial ownership or interest in the "resident" countries. Accordingly with effect from November 1, 2015 all investors will have Sundaram Mutual Fund / the AMC is classified as a 'Foreign Financial Institution' under the FATCA provisions. Accordingly, the AMC / Mutual Fund will be required to undertake due diligence process and identify US reportable accounts and collect such information / documentary evidences of the US and / or non-US status of its investors / Unit holders and disclose such information (directly or through its agents or service providers) as far as may be legally permitted about the holdings / investment returns to US Internal Revenue Service (IRS) and / or the Indian Tax Authorities. The MF has registered with US Internal Revenue Service (IRS) and has obtained a Global Intermediary Identification Number (GIIN): EY9227.99999.SL.356 for the said reporting purposes.

FATCA/CRS due diligence will be directed at each investor / Unit holder (including joint investor) and on being identified as a reportable person / specified US person, all the folios will be reported. In case of folios with joint holders, the entire account value of the investment portfolio will be attributable under each such reportable person. An investor / Unit holder will therefore be required to furnish such information as and when sought by the AMC in order to comply with the information reporting requirements stated in IGA and circulars issued by SEBI/Government of India in this regard from time to time. The information disclosed may include (but is not limited to) the identity of the investors and their direct or indirect beneficiaries, beneficial owners and controlling persons. Investors / Unitholders should consult their tax advisors regarding FATCA/CRS requirements with respect to their situation.

Brief note on fixed-income and money market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value: Stated value of the paper /Principal Amount Coupon: Zero, fixed or floating

Frequency: Semi-annual; annual, sometimes quarterly Maturity: Bullet, staggered

Redemption: FV; premium or discount Options: Call/Put

Issue Price: Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Types of Debt Market Instruments:

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos,

Inter- bank Call money deposit, CBLOs etc. They are mostly discounted instruments that are issued at a discount to face value.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year. Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities include central, state and local issues. The main instruments in this market are dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Corporate Debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

Central KYC

Central KYC Registry is a centralized repository of KYC records of customers in the financial sector with uniform KYC norms and inter-usability of the KYC records across the sector with an objective to reduce the burden of producing KYC documents and getting those verified every time when the customer creates a new relationship with a financial entity. KYC procedure means the due diligence procedure prescribed by the Regulator for identifying and verifying the proof of address, proof of identity and compliance with rules regulations, guidelines and circulars issued by the Regulators or Statutory Authorities under the Prevention of Money Laundering Act, 2002.

The Central Govt. vide notification dt. Nov, 26, 2015 has authorised Central Registry of Securitisation Asset Reconstruction and Security Interest of India (CERSAI) to act as and to perform the functions of the CKYC Registry including receiving, storing, safeguarding and retrieving the KYC records in digital form of a Client. A 14 digit CKYC identification Number (KIN) would be issued as identifier of each client.

As per PMLA (Maintenance of Records) Amendment rules, 2015, Rule 9(IA), every reporting entity shall within three days after the commencement of an account based relationship with an individual, file the electronic copy of the client's KYC records with the Central KYC Registry. Institutions need to upload the common KYC template along with the scanned copy of the certified supporting documents (Pol/PoA), cropped signature and photograph. SEBI vide its circular dated November 10, 2016 has advised all mutual funds to upload the KYC records of all existing customers into the CKYC database.

Since the records are stored digitally, it helps intuitions de-duplicate data so that they don't need to do KYC of customers multiple times. It helps institutions find out if the client is KYC compliant based on Aadhaar, PAN and other identity proofs. If the KYC details are updated on this platform by one entity, all other institutions get a real time update. Thus, the platform helps firms cut down costs substantially by avoiding

	multiplicity of registration and data upkeep. Please note that PAN is mandatory for investing in MF's (Except Micro KYC and other exempted scenarios). If CKYC is done without submission of PAN, then he/she will have to submit a duly self-certified copy of the PAN card alongwith KIN. Investors should submit the duly filled form along with supporting documents, particularly, self-certified copy of the PAN Card as a mandatory identity proof. If prospective investor submits old KRA KYC form, which does not have all information needed for registration with CKYC, such customer should either submit the information in the supplementary CKYC form or fill the CKYC form. - Acquisition cost of units in segregated portfolio to be proportionate to the NAV of assets transferred to the segregated portfolio to the NAV of the total portfolio immediately before the segregation. The cost of acquisition of the original units in the main portfolio to be reduced by the acquisition cost of units in the segregated portfolio.
