

I. Introduction

A. Definitions/interpretation

The detailed definitions/ interpretations refer to the link on website of the mutual fund viz.

<https://www.sundarammutual.com/sid-kim-disclosures>

B. Risk factors

Standard Risk Factors

- Mutual Funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- The main types of risks to which the Scheme is exposed are risk of capital loss, market risk, currency risk, liquidity risk, credit risk, counter party default risk, to name a few.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down.
- As with any investment in securities, the NAV of the Units issued under the Scheme can go up or down depending on the factors and forces affecting the capital markets.
- The NAV may be affected by factors such as market conditions, level of interest rates, market-related factors, trading volumes, settlement periods, transfer procedures, price/interest rate risk, credit risk, government policy, volatility and liquidity in markets, exchange rate, geo-political development, to name a few.
- Past performance of the Sponsor/Investment Manager/Mutual Fund does not guarantee future performance of the Scheme.
- The names of each Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- Change in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to Investors in the Scheme.
- Unit holders should be aware that the relevant fiscal rules and their interpretation might change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor/Unit holder is advised to consult his/her own professional tax advisor.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs 1 lakh made towards setting up the Fund.
- The Scheme is not a guaranteed or assured return Scheme.

Scheme-Specific Risks

The scheme strategy is to invest in companies which are relatively undervalued compared to its peers. Hence, evaluation of companies from value perspective may exclude companies which may not be considered a value investment, hence the Scheme may forgo some market opportunities available to the Scheme.

Value investing involves the risk that the market will not recognize a security's intrinsic value for a long time, or that a security thought to be undervalued may actually be appropriately priced when purchased. Hence, the return expectation from such investments will not be met.

i. Risks associated with investing in Equities

The Scheme being an equity scheme will be affected by the risks associated with the equity market. Equity and Equity related instruments on account of its volatile nature are subject to price fluctuations on daily basis. The volatility in the value of the equity and equity related instruments is due to various

micro and macro-economic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.

The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the schemes portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the schemes portfolio.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments. This may impact the ability of the unit holders to redeem their units. In view of this, the Trustee has the right, in its sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.

The Scheme may find itself invested in unlisted securities due to external events or corporate actions. This may increase the risk of the portfolio as these unlisted securities are inherently illiquid in nature and carry larger liquidity risk as compared to the listed securities or those that offer other exit options to the investors.

Investments in equity and equity related securities involve high degree of risks and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.

ii. Risks associated with investing in Bonds:

Investment in Debt is subject to price, credit, and interest rate risk. The NAV of the Scheme may be affected, inter alia, by changes in the market conditions, interest rates, trading volumes, settlement periods and transfer procedures.

Corporate debt securities are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations (credit risk). Debt securities may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of the creditworthiness of the issuer, among others (market risk). The Investment Manager will endeavor to manage credit risk through in-house credit analysis. The Scheme may also use various hedging products from time to time, as are available and permitted by SEBI, to attempt to reduce the impact of undue market volatility on the Scheme's portfolio.

The NAV of the Scheme's Units, to the extent that the Scheme is invested in fixed income securities, will be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline.

Investing in Bonds and Fixed Income securities are subject to the risk of an Issuer's inability to meet principal and interest payments obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk).

The timing of transactions in debt obligations, which will often depend on the timing of the Purchases and Redemptions in the Scheme, may result in capital appreciation or depreciation because the value of debt obligations generally varies inversely with the prevailing interest rates.

a. Interest Rate Risk

As with all debt securities, changes in interest rates will affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of longer-term securities generally fluctuate more in response to interest rate changes than do shorter-term securities. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the NAV.

b. Liquidity or Marketability Risk

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.

c. Credit Risk

Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk debentures are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.

d. Reinvestment Risk

This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk refers to the fall in the rate for reinvestment of interim cashflows.

e. Risks associated with various types of securities

	CREDIT RISK	LIQUIDITY RISK	PRICE RISK
Listed	Depends on credit quality	Relatively Low	Depends on duration of instrument
Unlisted	Depends on credit quality	Relatively High	Depends on duration of instrument
Secured	Relatively low	Relatively Low	Depends on duration of instrument
Unsecured	Relatively high	Relatively High	Depends on duration of instrument
Rated	Relatively low and depends on the rating	Relatively Low	Depends on duration of instrument
Unrated	Relatively high	Relatively High	Depends on duration of instrument

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern e.g. corporate bonds, carry a higher level of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

iii. **Risks associated with investing in Overseas / Foreign Securities**

The Fund may invest in overseas debt / equities / ADR's / GDR's with the approval of RBI/SEBI, subject to such guidelines as may be issued by RBI/SEBI. The net assets, distributions and income of the scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. The scheme's NAV may also be affected by a fluctuation in the general and specific level of interest rates internationally, or the change in the credit profiles of the issuers.

Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry a risk on account of fluctuations in foreign exchange rates, nature of securities market of the country concerned, repatriation of capital due to exchange controls and political circumstances.

To the extent that the assets of the schemes will be invested in securities denominated in foreign currencies, the Indian rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian rupee (if Indian rupee appreciates against these foreign currencies). The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the

application to it of other restrictions on investment. The scheme may have to pay applicable taxes on gains from such investment.

As regards foreign equity securities that are traded on exchanges that are not located in India basis of valuation will depend on the time zone of the respective country. For exchanges located in countries, with time zone earlier than India, the NAV will be calculated based on the closing price of the foreign equity security and the prevailing exchange rate on that date. For exchanges located in countries, with time zone later than India, the NAV will be calculated based on the closing price of the foreign equity security and the prevailing exchange rate of the previous date.

Subject to the Regulations, the investments may be in securities which are listed or unlisted, secured or unsecured, rated or unrated, and acquired through secondary market purchases, RBI auctions, open market sales conducted by RBI etc., Initial Public Offers (IPOs), other public offers, placements, rights, offers, negotiated deals, etc.

To avoid duplication of portfolios and to reduce expenses, the Scheme may invest in any other schemes of the Fund to the extent permitted by the Regulations. In such an event, AMC will not charge management fees on the amounts of the Schemes so invested, unless permitted by the Regulations.

Additional Risk Factors

The risk associated with underlying stocks remain the same except for the additional risk of fluctuation in the exchange rate of the Indian Rupee vis-à-vis US Dollar – the currency in which GDRs / ADRs are denominated. To manage risks associated with the portfolio, foreign currency and interest rate exposure, the Fund may use / invest in derivatives for efficient portfolio management including hedging and in accordance with the conditions as may be stipulated by SEBI / RBI. The Fund also hereby avers that offshore investments shall be made subject to any / all approvals, as well as the conditions thereof as may be stipulated by SEBI / RBI and provided such investments do not result in expenses to the fund in excess of the ceiling, if any, on the expenses prescribed by SEBI. The expenses to the fund shall be limited to the level which, in the opinion of the Fund, is reasonable and consistent with the costs and expenses

attendant to international investing. The Fund may, where necessary, appoint other intermediaries of repute such as advisors, submanagers, sub-custodian etc. for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses. The fees and expenses would illustratively include, besides the investment management fee, custody fees and costs, fees of appointed overseas advisors and submanagers, transaction costs, and overseas regulatory costs.

iv. Risk associated with investing in Derivatives

a. Valuation Risk

The risk in valuing the Debt & Equity derivative products due to inadequate trading data with good volumes. Derivatives with longer duration would have higher risk viz a viz the shorter duration derivatives.

b. Mark to Market Risk

The day-to-day potential for an investor to experience losses from fluctuations in underlying stock prices and derivatives prices.

c. Systematic Risk

The risk inherent in the capital market due to macro economic factors like Inflation, GDP, Global events.

d. Liquidity Risk

The risk stemming from the lack of availability of derivatives products across different maturities and with different risk appetite.

e. Implied Volatility

The estimated volatility of an underlying security's price and derivatives price.

f. Interest Rate Risk

The risk stemming from the movement of Interest rates in adverse direction. As with all the debt securities, changes in the interest rates will affect the valuation of the portfolios.

g. Counterparty Risk (Default Risk)

Default risk is the risk that losses will be incurred due to the default by the counterparty for over the counter derivatives.

h. System Risk

The risk arising due to failure of operational processes followed by the exchanges and OTC participants for the derivatives trading.

v. Risk attached with the use of derivatives

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. AMC NAM the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Also, the market for derivative instruments is nascent in India.

vi. Risk Associated with Securitised Debt

The Scheme may invest in Securitised debt.

As with any other debt instrument, the following risk factors have to be taken into consideration while investing in PTCs:

a. Credit Risk

Since most of the PTCs are drawn from a cherry picked pool of underlying assets, the risk of delay / default due to poor credit quality is low. Further more most of the PTCs enjoy additional cashflow coverage in terms of subordination by another lower class of PTCs or in terms of excess cash collateralization.

b. Liquidity Risk

Historically the secondary market volume of securitised papers has been limited. This could limit the ability of the fund to resell them. Secondary market trades could be at a discount or premium depending upon the prevailing interest rates.

c. Price Risk / Interest Rate Risk

The price risk of these instruments shall be in line with the maturity / duration of such instruments. However given the fact that these instruments will have a maturity profile upto 2 years, the duration risk is relatively less. Domestic Securitised debt can have different underlying assets and these assets

have different risk characteristics.

These may be as given in the following example:

Security 1 - Backed by receivables of personal loans originated by SFL Bank

Security 2 - Senior Series Pass Through Certificates backed by commercial vehicles and two-wheeler loan and loan receivables from SAMC Bank Limited.

Specific Risk Factors: Loss due to default and/or payment delay on Receivables, Premature Termination of Facility Agreements, Limited loss cover, Delinquency and Credit Risk, Limited Liquidity and Price Risk, Originator/Collection Agent Risk, Bankruptcy of the Originator, Co-mingling of funds

vii. Risk associated with Securities Lending

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. In case the Scheme undertakes stock lending under the Regulations, it may, at times be exposed to counter party risk and other risks associated with the securities lending. Unitholders of the Scheme should note that there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the Approved Intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

viii. Other Scheme Specific Risk factors:

- a. The liquidity of the Scheme's investments may be inherently restricted by trading volumes, settlement periods and transfer procedures. In the event of an inordinately large number of redemption requests, or of a re-structuring of the Scheme's investment portfolio, these periods may become significant.
- b. Although the objective of the Fund is to generate optimal returns, the objective may or may not be achieved. The investors may note that if the AMC/Investment Manager is not able to make the right decision regarding the timing of increasing exposure in debt securities in times of falling equity market, it may result in negative returns. Given the nature of the scheme, the portfolio turnover ratio may be on the higher side and the AMC may change the full portfolio commensurate with the investment decisions and Asset Allocation of the Scheme. At times, such churning of portfolio may lead to losses due to subsequent negative or unfavorable market movements.
- c. The tax benefits described in this Scheme Information Document are as available under the present taxation laws and are available subject to relevant conditions. The information given is included only for general purpose and is based on advice received by the AMC regarding the law and practice currently in force in India and the Unit holders should be aware that the relevant fiscal rules or their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Scheme will

endure indefinitely. In view of the individual nature of tax consequences, each Unit holder is advised to consult his / her own professional tax advisor.

ix. Risk Factors Associated with Investments in REITs and InvITS:

- **Market Risk:** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC/Fund Manager's will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.
- **Liquidity Risk:** As the liquidity of the investments made by the Scheme(s) could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or IDCW pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc may differ from existing capital market asset classes under Indian Law.

The above are some of the common risks associated with investments in REITs & InvITs. There can be no assurance that a Scheme's investment objectives will be achieved, or that there will be no loss of capital. Investment results may vary substantially on a monthly, quarterly or annual basis

x. Other Risk Factors:

- a. Credit And Rating Downgrade Risk, Prepayment And Foreclosures Risk for Senior PTC Series, Servicing Agent Risk, Co-mingling Risk, and Bankruptcy of the Seller.
- b. The NAV of the scheme to the extent invested in Debt and Money market securities are likely to be affected by changes in the prevailing rates of interest and are likely to affect the value of the Scheme's holdings and thus the value of the Scheme's Units.
- c. The AMC may, considering the overall level of risk of the portfolio, invest in lower rated/ unrated securities offering higher yields. This may increase the risk of the portfolio.
- d. Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.
- e. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- f. Investment decisions made by the AMC may not always be profitable, even though it is intended to generate capital appreciation and maximize the returns by actively investing in equity and equity related securities.
- g. The AMC carries out valuation of investments made by the Scheme. The AMC values Securities and assets in the Scheme according to the valuation policies described in the Statement of Additional Information.

C. Risk Mitigation Strategies

Type of Risks	Measures/ Strategies to control risks
Equity Markets/ Equity Oriented Instruments	- Investment strategy: The fund will comply with the prescribed SEBI limits on exposure. Risk is monitored and necessary action would be taken on the portfolio, if required. Attribution analysis is done to monitor the under or over performance vis a vis the benchmark and the reasons for the same. - Portfolio volatility & concentration: The overall volatility of the portfolio would be maintained in line with the objective of the scheme. Volatility would be monitored with respect to the benchmark and peer set. - Liquidity: The scheme predominantly invests across market capitalisations which are actively traded and thereby liquid. The fund manager may also keep some portion of the portfolio in debt and money market instruments and/or cash within the specified asset allocation framework for the purpose of meeting redemptions. The liquidity would be monitored and necessary action would be taken on the portfolio if required. Stock turnover is monitored at regular intervals.
Debt and Money Market instruments	- Credit Risk: Management analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken. - Price-Risk or Interest-Rate Risk: The Scheme may primarily invest the debt portion of the portfolio in short term debt & money market instruments, units of Liquid and Overnight schemes thereby mitigating the price volatility due to interest rate changes generally associated with long-term securities. - Risk of Rating Migration: The Scheme may primarily invest the debt portion of the portfolio in shortterm debt & money market instruments, units of Liquid and Overnight

	schemes thereby mitigating the risk of rating migration generally associated with long-term securities. • Basis Risk: The debt allocation of scheme is primarily as a cash management strategy and such strategy returns are expected to reflect the very short term interest rate hence investment is done in short term debt and money market instruments. • Spread Risk: The Scheme may primarily invest the debt portion of the portfolio in short-term debt & money market instruments, units of Liquid and Overnight schemes thereby mitigating the risk of spread expansion which is generally associated with long-term securities • Reinvestment Risk: The debt allocation of scheme is primarily as a cash management strategy and such strategy returns are expected to reflect the very short-term interest rate hence investment is done in short term debt and money market instruments. Reinvestment risks will be limited to the extent of debt instruments, which will be a very small portion of the overall portfolio value. • Liquidity Risk: The Scheme may, however, endeavor to minimize liquidity risk by primarily investing the debt portion of the portfolio in relatively liquid short-term debt & money market instruments, units of Liquid and Overnight schemes.
Derivatives	The Scheme may invest in derivative for the purpose of hedging, portfolio balancing and other purposes as may be permitted under the Regulations. Equity Derivatives will be used in the form of Index Options, Index Futures, Stock Options and Stock Futures and other instruments as may be permitted by SEBI. Exposure with respect to derivatives shall be in line with regulatory limits and the limits specified in the SID. The Risk Team would monitor the various parameters of derivatives exposure to ensure risk levels are at an optimal level in line with the objective of the scheme.

Securities Lending	The SLB shall be operated through Clearing Corporation/Clearing House of stock exchanges having nation-wide terminals who are registered as Approved Intermediaries (AIs).” The risk is adequately covered as Securities Lending & Borrowing (SLB) is an Exchange traded product. Exchange offers an anonymous trading platform and gives the players the advantage of settlement guarantee without the worries of counter party default. However, the Fund may not be able to sell such lent securities during contract period or have to recall the securities which may be at higher than the premium at which the security is lent
Currency	The scheme subject to applicable regulations shall have the option to enter into forward contracts for the purpose of hedging against the foreign exchange fluctuations. The Schemes may employ various measures (as permitted by SEBI/RBI) including but not restricted to currency hedging (such as currency options and forward currency exchange contracts, currency futures, written call options and purchased put options on currencies and currency swaps), to manage foreign exchange movements arising out of investment in foreign securities. All currency derivatives trade, if any will be done only through the stock exchange platform
Repo Transactions	This risk is largely mitigated, as the choice of counterparties is largely restricted and their credit rating is taken into account before entering into such transactions. Also, operational risks are lower as such trades are settled on a DVP basis. In the event the counterparty is unable to pay back the money to the scheme as contracted on maturity, the scheme may dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the counterparty.

REITs and InvITS	The fund will comply with the prescribed SEBI limits on exposure. The scheme will endeavour to invest in liquid REITs & InvITS.
Structured Obligation (SO) & Credit Enhancement (CE) rated securities	Scheme wise investments as prescribed by the regulations limits the exposure to such securities. Additionally, covenants of such structured papers are reviewed periodically for adequate maintenance of covers as prescribed in the Information Memorandum of such papers.
Government securities and Triparty repo on Government securities or treasury bills:	As a member of securities segment and Triparty repo segment, maintenance of sufficient margin is a mandatory requirement. CCIL monitors these on a real time basis and requests the participants to provide sufficient margin to enable the trades etc. Also, there are stringent conditions / requirements before registering any participants by CCIL in these segments. Since settlement is guaranteed the loss on this account could be minimal though there could be an opportunity loss.
Units of mutual fund schemes	Mutual Fund portfolios are generally well diversified and typically endeavor to provide liquidity on aT+1/T+2 basis and aim to mitigate any risks arising out of underlying investments.

Securitized Debt:

The investments in domestic securitized debt will be made only after giving due consideration to factors such as but not limited to the securitization structure, quality of underlying receivables, credentials of the servicing agent, level of credit enhancement, liquidity factor, returns provided by the securitized paper vis-a-vis other comparable investment alternatives.

Although the returns provided by securitized debt could be higher, one must not lose sight of the fact that risks also exist with regard to investments in securitized debt. Investments in pass-through certificates of a securitization transaction represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the issuer or the seller, or the parent of the seller, or any affiliate of the seller or the issuer or the trustee in its personal capacity, save to the extent of credit enhancement to be provided by the credit enhancer. The trust's principal asset will be the pool of underlying receivables. The ability of the trust to meet its obligations will be dependent on the receipt and transfer to the designated account of collections made by the servicing agent from the pool, the amount available in the cash collateral account, and any other amounts received by the trust pursuant to the terms of the transaction documents. However, the credit enhancement stipulated in a securitization transaction represents a limited loss cover only. Delinquencies and credit losses may cause depletion of the amount available under the cash collateral account and thereby the scheduled payouts to the investors may get affected if the amount available in the cash collateral account is not enough to cover the shortfall.

Further Unit holders are requested to refer below the disclosure relating to investments in securitized debt, in the SEBI prescribed format:

(i) How the risk profile of securitized debt fits into the risk appetite of the Scheme:

The Scheme seeks to generate an attractive return, consistent with prudent risk, from a portfolio which is substantially constituted of quality debt securities. In line with the investment objective, securitised debt instruments having a high credit quality commensurate with other debt instruments in the portfolio will be considered for investment.

(ii) Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc

The parameters used to evaluate originators are

- Track record
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are also considered: -
 - Outlook for the economy (domestic and global)
 - Outlook for the industry - Company specific factors.

In addition a detailed review and assessment of rating rationale is done including interactions with the originator as well as rating agency.

Critical Evaluation Parameters (for pool loan) regarding the originator / underlying issuer:

- Default track record/ frequent alteration of redemption conditions / covenants
 - High leverage ratios of the ultimate borrower - both on a standalone basis as well on a consolidated level/ group level
 - Higher proportion of re-schedulement of underlying assets of the pool or loan, as the case may be
 - Higher proportion of overdue assets of the pool or the underlying loan, as the case may be
 - Poor reputation in market
 - Insufficient track record of servicing of the pool or the loan, as the case may be.

(iii) Risk mitigation strategies for investments with each kind of originator

Analysis of originator: An independent Credit Risk Team analyses and evaluates each originator and sets up limits specifying both the maximum quantum and maximum tenor for investments and investments are considered only within these limits.

Originator analysis typically encompasses:

- Size and reach of the originator
- Collection process, infrastructure and follow-up mechanism
- Quality of MIS
- Credit enhancement for different type of originator

(iv) The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

Eligible assets: Only assets with an established track record of low delinquencies and high credit quality over several business cycles will be considered for investment.

Analysis of pool: Characteristics such as average pool maturity (in months), average loan to value ratio, average seasoning of the pool, maximum single exposure, geographical distribution and average single exposure are studied to determine pool quality.

Risk mitigating measures: Credit enhancement facilities (including cash, guarantees, excess interest spread, subordinate tranches), liquidity facilities and payment structure are studied in relation to historical collection and default behaviour of the asset class to ensure adequacy of credit enhancement in a stress scenario.

- (v) Minimum retention period of the debt by originator prior to securitization

We will follow the guidelines on minimum holding period requirements as laid down by SEBI and RBI from time to time.

- (vi) Minimum retention percentage by originator of debts to be securitized

We will follow the guidelines on minimum holding period requirements as laid down by SEBI and RBI from time to time.

- (vii) The mechanism to tackle conflict of interest when the Mutual Fund invests in securitized debt of an originator and the originator in turn makes investments in that particular Scheme of the Fund

The AMC has an independent Credit Risk team which is distinct from the Sales function and the Investments function and has a separate reporting and appraisal structure designed to avoid conflict of interest. Investments can be initiated by the fund managers only after the Credit Risk team has assigned limits for the originator. The originator wise limits specify both the maximum quantum and maximum tenor for investments.

- (viii) The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

The AMC has a rigorous risk management process for all fixed income investments, which also encompasses securitized debt. A dedicated Credit Risk team is responsible for monitoring risks including credit and liquidity risk. The functions of the Credit Risk team include:

- Detailed credit analysis of issuers: based on the management evaluation, operating strength and financial strength to determine suitability for investment. Periodic reviews on a quarterly/annual basis are under taken for eligible issuers. Ratings are monitored on a daily basis and any changes are immediately recorded and suitable action taken.
- Credit Risk team monitors adherence to single and group level exposure norms, minimum rating requirements, liquidity requirements, and ensures that only eligible securities are included in the fund, in line with the Scheme information document/internal templates.

For securitized pool loan exposures, the analysis includes pool seasoning, pool asset quality, diversification, collateral margin, originator analysis and credit enhancement mechanisms. Pool performance statistics published by rating agencies are analysed for performance of other securitised pools of the same originator as well as for the performance of the asset class as a whole. Regular interactions with the rating agencies are done to discuss performance trends. Documents are vetted by the legal and compliance team. In addition, monthly payout reports from the trustees are analysed for collection performance and adequacy of cash collateral.

Framework that is applied while evaluating investment decision relating to a pool securitization transaction.

Characteristics / Type of Pool Mortgage Loan Commercial Vehicle and Construction Equipment CAR 2 wheelers Others	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Others
Approximate Average maturity (in Months)	In line with average maturity of mortgage loans as per industry norms.	In line with average maturity of Commercial Vehicle and Construction Equipment loans	In line with average maturity of car loans as per industry	In line with average maturity of two wheeler loans as per industry norms.	In line with average maturity of the asset class as per industry norms.

	Typically less than 10 years.	as per industry norms. Typically less than 4 years.	norms. Typically less than 4 years.	Typically less than 4 years.	
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	The collateral margin will be adequate for the pool to achieve a rating in the high safety category at the time of initial rating. The collateral margin will ensure at least a 3 times cover over historical losses observed in the asset class.	The collateral margin will be adequate for the pool to achieve a rating in the high safety category at the time of initial rating. While these measures are expected to mitigate the above risks to a large extent, there can be no assurance

that these risks will be completely eliminated. The measures mentioned above are based on current market conditions and may change from time to time based on changes in such conditions, regulatory changes, and other relevant factors. Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change in response to the same.

This is only an illustrative list and not an exhaustive list of risk factors that could affect the NAV of the Scheme.. Potential investors are advised to consult their investment advisors before taking investment decisions.

Investors/unit holders are also urged to read the detailed clause(s) titled 'Special considerations'.

The scheme got the approval from the AMC and Trustee to enable the segregation of portfolio in case of credit event

SEBI vide circular number SEBI/HO/IMD/DF2/CIR/P/2018/160 and dated 28th December 2018 prescribed the procedure for segregation of portfolio in mutual fund schemes. Following is the extract from the circular:

1. Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA), as under:
 - Downgrade of a debt or money market instrument to 'below investment grade', or
 - Subsequent downgrades, or
 - Similar such downgrades of a loan rating.
2. In case of difference in rating by multiple CRAs, the most conservative rating shall be considered. Creation of segregated portfolio shall be based on issuer level credit events and implemented at the ISIN level.
3. Creation of segregated portfolio shall be optional and at the discretion of the AMC. It should be created only if the SID of the scheme has provisions for segregated portfolio with adequate disclosures.
4. AMCs shall have a detailed written down policy on creation of segregated portfolio and the same shall be approved by the trustees.
5. Process for creation of segregated portfolio
 - a. AMC shall decide on creation of segregated portfolio on the day of credit event. Once an AMC decides to segregate portfolio, it shall
 - i. seek approval of trustees prior to creation of the segregated portfolio.
 - ii. immediately issue a press release disclosing its intention to segregate such debt and money market instrument and its impact on the investors.
 - iii. ensure that till the time the trustee approval is received, which in no case shall exceed 1 business day from the day of credit event, the subscription and redemption in the scheme shall be suspended for processing with respect to creation of units and payment on redemptions.
 - b. Once trustee approval is received by the AMC,
 - i. Segregated portfolio shall be effective from the day of credit event ii. AMC shall issue a press release immediately with all relevant information pertaining to the segregated portfolio. The said information shall also be submitted to SEBI.
 - ii. An e-mail or SMS should be sent to all unit holders of the concerned scheme.
 - iii. The NAV of both segregated and main portfolio shall be disclosed from the day of the credit event.
 - v. All existing investors in the scheme as on the day of the credit event shall be allotted equal number of units in the segregated portfolio as held in the main portfolio.
 - vi. No redemption and subscription shall be allowed in the segregated portfolio. however, in order to facilitate exit to unit holders in segregated portfolio, AMC shall enable listing of units of segregated portfolio on the recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests.
 - c. If the trustees do not approve the proposal to segregate portfolio, AMC shall issue a press release immediately informing investors of the same.
6. Valuation and processing of subscriptions and redemptions
 - a. the valuation should take into account the credit event and the portfolio shall be valued based on the principles of

fair valuation (i.e. realizable value of the assets).

- b. All subscription and redemption requests for which NAV of the day of credit event or subsequent day is applicable will be processed as per the existing circular on applicability of NAV as under:
 - i. upon trustees' approval to create a segregated portfolio
 - Investors redeeming their units will get redemption proceeds based on the NAV of main portfolio and will continue to hold the units of segregated portfolio.
 - Investors subscribing to the scheme will be allotted units only in the main portfolio based on its NAV.
 - ii. In case trustees do not approve the proposal of segregated portfolio, subscription and redemption applications will be processed based on the NAV of total portfolio (scheme portfolio including the securities affected by the credit event).

Special Considerations

Prospective investors should review / study this Scheme Information Document carefully and in its entirety and shall not construe the contents hereof or regard the summaries contained herein as advice relating to legal, taxation, or financial/investment matters and are advised to consult their own professional advisor(s) as to the legal or any other requirements or restrictions relating to the subscription, gifting, acquisition, holding, disposal (sale, transfer, switch or redemption or conversion into money) of units and to the treatment of income (if any), capitalisation, capital gains, any distribution, and other tax consequences relevant to their subscription, acquisition, holding, capitalisation, disposal (sale, transfer, switch or redemption or conversion into money) of units within their jurisdiction / of nationality, residence, domicile etc. or under the laws of any jurisdiction to which they or any managed Scheme to be used to purchase/gift units are subject, and (also) to determine possible legal, tax, financial or other consequences of subscribing / gifting to, purchasing or holding units before making an application for units.

Neither this Scheme Information Document nor the units have been registered in any jurisdiction outside India. The distribution of this Scheme Information Document in certain jurisdictions may be restricted or subject to registration requirements and, accordingly, persons who come into possession of this Scheme Information Document in certain jurisdictions are required to inform themselves about, and to observe, any such restrictions. No person receiving a copy of this Scheme Information Document or any accompanying application form in such jurisdiction may treat this Scheme Information Document or such application form as constituting an invitation to them to subscribe for units, nor should they in any event use any such application form, unless in the relevant jurisdiction such an invitation could lawfully be made to them and such application form could lawfully be used without compliance with any registration or other legal requirements. Neither the delivery of this Scheme Information Document nor any sale made hereunder shall, under any circumstances, create any implication that the information contained herein is correct.

Details under FATCA/Common Reporting Standards (CRS)/Foreign Tax Laws

Compliance under Foreign Account Tax Compliance Act /Common Reporting Standard requirements: Foreign Account Tax Compliance Act: Foreign Account Tax Compliance Act ("FATCA") is a United States (US) law aimed at prevention of tax evasion by US citizens and residents ("US Persons") through use of offshore accounts. FATCA obligates foreign financial institution (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information on the accounts of to report accounts held by specified US Persons. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts. With respect to individuals, the US reportable accounts would cover those with US citizenship or US residency. The identification of US person will be based on one

or more of following "US indicia" • Identification of the Account Holder as a US citizen or resident; Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number; • Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An "in-care of or "hold mail" address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. Since domestic laws of sovereign countries, (including India) may not permit sharing of confidential client information by FFIs directly with US IRS, the U.S. has entered into Inter-Governmental Agreement (IGA) with various countries. The IGA between India and USA was signed on 9th July, 2015, which provides that the Indian FIs will provide the necessary information to Indian tax authorities, which will then be transmitted to USA automatically. Common Reporting Standard - The New Global Standard for Automatic Exchange of Information: On similar lines as FATCA, the Organization of Economic Development (OECD), along with the G20 countries, of which India is a
